1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8 and 11-18, drawn to an analytic chemistry system, classified in class 436, subclass 164.
  - II. Claims 9, 10 and 19-31, drawn to an analytic chemistry sensor includes a bundle of optical fiber , classified in class 385, subclass 12.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because claim 19 is an evidence claim. The subcombination has separate utility such as the subcombination can be used in a system including an integrated optical device instead of optical fiber bundle.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
